This book aims to provide every soccer aficionado with a practical insight into the topics of match ideas, tactics, match systems and match plans using easy-to-understand language. On that basis, the author identifies advantages and disadvantages of various formations utilized by top teams and then uses match plans to analyze how those formations can be defeated in play.

### **Playing the Modern 3-5-2 Soccer Formation**

Marcus Dibernardo 2016-10-08 The 3-5-2 is a very dynamic and flexible system; it can be an ultra-attacking formation or solid defensive formation depending on how it is deployed. In attack the 3-5-2 is numerically strong in the midfield and comes with the benefit of two strikers. Creating width in the attack is never a problem with two wingers and strikers that could also run the channels. The formation is naturally set-up to encourage movement off the ball with the interchanging of positions when in possession; the interchanging of positions and movement off the ball allows different players the opportunity to fill different spaces, making the 3-5-2 more dynamic and difficult for the opponent to predict and deal with. In the modern game I personally find many advantages to playing the 3-5-2

formation, due to its fluid attacking potential and less focus on keeping numbers back. The defensive side of the 3-5-2 presents the formations biggest challenges, yet it can also be seen as a strength if the players understand how to form a back four or five in the correct situations. With only three defenders in the back, covering space in deep wide areas must be addressed and dealt with effectively. In order to offset the possible defensive weakness that come with three players not being able to cover the entire width of the field, the coach must choose player personnel and more importantly the formations tactics wisely. In this book I will cover multiple ways the 3-5-2 can be played to maximize its strengths, while turning the formations possible negatives into positives. When breaking down and analyzing any formation, it is important to note that the difference between formations is about 10 yards in player positioning. You can make an argument that most formations are similar and

difficult to identify once the game has started. The transition from defending to attacking and attacking to defending creates totally new shapes from the original formation. The game of soccer is a free-flowing game but inside that flow there must be a structure which drives individual and team decisions. The coach is the one who will lay out the important tactical guidelines for the execution of the formation, so it is important to note that the same formation can be carried out in many different ways, depending on the coach. Tactics that will influence the way the formation played include things like setting a line of restraint, establishing a line of confrontation, identifying pressing zones, outlining counter-attacking areas, realizing when to press or drop-off, addressing the overall style of soccer to be played, player personnel, work load, location of the game, weather conditions, field conditions and much more. All these factors will directly influence the way a
